***LEX MARITIMA* IN A CHANGING WORLD – A CLOSE LOOK AT DEVELOPMENT AND PROSPECT OF RULES GOVERNING CARRIAGE OF GOODS BY SEA**

Dr Lijun Zhao*

© Springer Nature Switzerland AG 2020, P. K. Mukherjee et al. (eds.), Maritime Law in Motion, WMU Studies in Maritime Affairs 8, pp.761-783, https://doi.org/10.1007/978-3-030-31749-2_37

Abstract:

This research examines the attempts to unifying law governing carriage of goods by sea and the background to these attempts over the past hundred years or so. It finds that a repetition of the current mode of negotiating static conventions will not unify these rules. Moreover, from historic and legal perspectives, the attempts to unify the international carriage of goods by sea regimes in the past century have remained transitional. The active players have shifted from private entrepreneurs to government delegates. This research probes into the new trade practice for the shipping industry in the 21st century and argues that new ‘landscape’ calls for innovative modifications of the conventional approach to unifying carriage of goods by sea rules. This research also forecasts the prospects of the Rotterdam Rules and discusses several countries’ current attitudes, including the UK, the Netherlands, Scandinavian countries and, particularly, the USA.

1. Introduction

Maritime law has a long tradition of international uniformity. The existence of ‘*Lex Maritima*’ comprising a complex of internationally accepted rules of maritime law which may be traced in particular back to usage and general principles is widely, and even increasingly, subscribed to by legal doctrine.¹ The international community has tried to unify

* Senior Lecturer, Middlesex University London, Qualified lawyer in China, Fellow of the Society of Legal Scholars and the British Institute of International and Comparative Law. Research interest: International Business Law and International Law. Email: L.Zhao@mdx.ac.uk. An early version of this work has been

the rules governing carriage of goods by sea since the late 19th century, the adoption of international conventions. Nevertheless, the development of uniform rules has slowed down. This research intends to examine the existing attempts to unifying carriage of goods by sea rules and foresee the prospect of the latest convention in this area of law – the Rotterdam Rules.

The first breakthrough took place with the negotiations of the Brussels Convention for the Unification of Certain Rules of Law Relating to Bills of Lading ('Hague Rules') in the 1920s.² As the laws lagged behind commercial practice, the second attempt at uniformity was the Visby amendments to the prior convention ('Visby Rules').³ After World War II, the work towards uniformity went through an interregnum, shifting from mainly private commercial efforts to more politicised pressures.⁴ The more revolutionary attempts have been the United Nations Convention on the Carriage of Goods by Sea ('Hamburg Rules')⁵ in the 1970s, and the recent United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea ('Rotterdam Rules').⁶ Numerous scholars have devoted themselves to the technical aspects of the four related conventions,⁷ but there has been little literature scrutinising the dynamics between all the attempts to unify the law.⁸

"Every true history is contemporary history."⁹ Over the centuries, trade practice has been the primary driver of change in the way in which transport and shipping are carried out the global trade. History can often be seen to repeat itself. By setting the preceding conventions of the Rotterdam Rules in their historical contexts, readers can understand better the aim and prospect of the Rotterdam Rules themselves. An historical review of the unifying efforts by the international community to date will provide us with the necessary perspective to appreciate the cyclical and interactive processes involved.

presented and commented at the 9th International Conference on Maritime Law, held by China Maritime Law Association and organised by Shanghai Maritime University, in Shanghai. I thank the anonymous reviewers and commentators for their careful reading and invaluable feedback.

2. Lessons Learned from the Age Shaping the Hague Rules

2.1 Steamer Vessels, Opening of the Suez Canal, and Liner Conferences (1850s-1900s)

In the second half of the 19th century, the shipping industry experienced unprecedented developments.¹⁰ The steam engine significantly increased the power of vessels,¹¹ and as a result enhanced their ability to transport goods. Between 1854 and 1856, John Elder reduced fuel consumption of these engines to approximately 2 to 2.5 pounds of good coal per horsepower per hour thus enhancing their capacity for steamers.¹² Later, the invention of the compound engine and the triple expansion engine also substantially cut fuel consumption, and thus space formerly used for fuel storage became available for cargo.¹³ The improvements in engines further reduced the cost of ocean carriage.¹⁴ Consequently, steam ships became competitors to the sailing ship in the early 1880s.¹⁵

Steamers also increased the amount of goods carried. Fletcher has estimated that international sea carriage of goods increased over 400 percent between 1850 and 1869.¹⁶ The increased size of the shipping industry arose from the conversion from sailing vessels to steamers.¹⁷

The steam vessel further guaranteed transportation frequency and encouraged the emergence of liners. Before the emergence of the steamer, sea carriage was undertaken by sailing fleets, relying heavily on the wind.¹⁸ So, the scope of shipping was limited by the wind.¹⁹ Because of the vagaries of the wind and ocean currents, sailing ships could not offer a regular scheduled service.²⁰ However, steamships began to offer regular and scheduled services, and liner shipping became established.²¹

Moreover, the opening of the Suez Canal in 1869 significantly shortened the transportation distance between Europe and Asia, and caused dramatic changes to the international sea

²⁰ See Boyce (1995), p.25.

²¹ See Armstrong (1991), pp.55-65. See also Burley (1968). Although sailing ships were operated as liner shipping on the UK-Australia and Germany-South America routes, this was very exceptional.

carriage of goods.²² Sailing ships were hampered by the lack of wind and ocean currents in the Red Sea, the Suez Canal and the Mediterranean Sea, as well as the prohibitive cost of being towed more than a hundred miles through the canal.²³ After the inauguration of the Suez Canal on 17 November 1869, steamers started replacing sailing ships particularly on the routes between the Far East and Europe.²⁴

These developments in shipping practice triggered the formation of liner conferences. The first successful liner conference (the Calcutta Conference) emerged in 1875, shortly after the opening of the Suez Canal.²⁵ Subsequently, liner conferences spread worldwide.²⁶ These conferences aimed to stop uncontrolled destructive competition, preventing freight rebates to preferential shippers, and to impose equal rates on ports.²⁷ On the whole, the invention of the steamship, the opening of the Suez Canal, and the formation of the liner conference system, largely shaped the shipping industry of the second half of the 19th century.²⁸

As demonstrated from the history that the steamer vessels had not replaced sailing vessels for a long period of time, and they in fact co-existed and also competed with each other in the Eurasian trade route, for instance, of tea trade. The replacement was not resulted from, at least not the only cause, the “new” technology of steamers grew mature. Still importantly, the newly emerged shipping route, the opening of the Suez Canal, shaped the commercial need and accordingly shipping routes and practice. Accordingly, the author predicts that the newly emerged technology, such as blockchain and unmanned and autonomous vessels, would be coexisting with what we have had for now, for some time which might last several decades.

²² The distance had been reduced to nearly half. See Fletcher (1958), p. 559. See also Samuda (1870), pp.1-8. Take the journey from Bombay, India to Liverpool, UK as an example: a sailing ship required an 11,560 sea-mile trip round the Cape of Good Hope; by substituting the canal route for the Cape, a steam ship could save 5,777 nautical miles.

²³ Ibid, 558.

²⁴ Ibid, 558-559 (From December 1869 to 1875, there were only 238 sailing ships out of the 5236 vessels passing through the canal). Because there is not enough wind power (and ocean currents) for them in the Suez-Canal-and-Red-Sea route as opposed to the open-seas route, the sailing ships had to take longer routes via the Cape of Good Hope. However, the consumption of fuel made them less competitive than steamers on the Europe-Asia routes.

²⁵ Sjostrom (2004), p.107.

²⁶ E.g. The Australia conference was launched in 1884, the South African conference in 1886, the West African and northern Brazil conference in 1895, the River Plate conference in 1896, the west coast of South America conference in 1904, and a North Atlantic trade conference around 1900. These conferences covered most outbound transport from Europe, while the inbound voyage was carried by tramp vessels for bulk cargo. See more in H.J. Dyos and D.H. 2.2 The Wave of Harter-style Domestic Legislation Prior to the Hague Rules (1892-1919)

Courts in different jurisdictions held various attitudes towards the exculpatory clauses under the regime of freedom of contract. Traditionally, the courts, particularly those of the UK, prioritised the freedom of contract, even in the event that the two contracting parties held different bargaining powers.²⁹ This was not taken for granted in the US, however. The courts in different jurisdictions, therefore, held varying attitudes towards the freedom of contract and exemption clauses, depending on the public policy³⁰ underpinning the specific country. On balance, “in countries where cargo interest dominated, ‘negligence’ clauses were declared invalid; in other countries, where hull interests prevailed, such clauses were given effect under the cover of an almost unlimited freedom of contracting.”³¹

Those with cargo interests increasingly detested the carriers’ abuse of their predominant power over exculpatory clauses.³² The resistance against freedom of contract came not only from shippers, but also from others with cargo interests, such as bankers and underwriters.³³ In 1890, the British cargo interests, for example, the Glasgow Corn Trade Association, complained to the British Prime Minister that carriers’ “bills of lading are so unreasonable and unjust in their terms as to exempt [the carriers] from almost every conceivable risk and responsibility.”³⁴ Meanwhile, French³⁵ and American cargo interests also shared this concern.³⁶ Despite the hostility of the US courts to these exculpatory clauses, carriers continued benefiting from them, because the choice-of-law and choice-of-forum clause required all cargo claims to be initiated in the UK under British law.³⁷ Thus, American cargo interests started to lobby the US Congress to oppose the European carriers.³⁸ Additionally, in the late 19th century, the rise of the United States as a power equal to Europe increased the

²⁹ Yiannopoulos (1958), pp. 609–627.

³⁰ In *re Missouri Steamship Company* (1889) LR 42 ChD 321, 322, it was for the court to decide if it was the English law or the US law which governed the contract of carriage in question, whereas the negligence clause would be enforceable in England but void in the United States in light of public policy. The Hague Rules afford protection to the underdog with weaker bargaining power, especially when a third party is engaged, who is necessarily bound by the contract of carriage without having had any chance to negotiate the contract under the public policy protection for them.

influence of American domestic law in international shipping.³⁹ In consequence, the US Harter Act⁴⁰ was enacted in 1893 to balance cargo and vessel interests governing all sea carriage to and from the US.⁴¹

The Harter Act and subsequent judicial rulings⁴² set American courts on a path greatly different from that of UK rulings.⁴³ The shift originated from the US Supreme Court's recognition of the need to protect American shippers by American courts. The American domestic merchant fleet relied on British steamships for international carriage of goods by sea, owing to the decline of the American shipping industry.⁴⁴

The US Harter Act has had a long-lasting impact on carriage of goods by sea.⁴⁵ Being an aggressive⁴⁶ regulation, it triggered a wave of legislation dominated by cargo interests in lieu of hull interests not only in the US, but also in Commonwealth countries. Several countries followed the US and unilaterally enacted domestic legislation governing exoneration clauses in bills of lading.⁴⁷ Besides the US Harter Act 1893, there were another four Harter-style pieces of legislation enacted prior to the Hague Rules.⁴⁸ These were the Australian Carriage of Goods by Sea Act 1904,⁴⁹ the New Zealand Shipping and Seamen Act 1903,⁵⁰ the Canadian Water Carriage Act 1910,⁵¹ and the French Morocco Maritime Commercial Code

³⁹ Faria (2009), 279. The Europe was the undeniably supreme power of the world when the US Harter Act was ratified in 1893. However, Japan and the United States became ascendant powers before World War I. Europe, which had colonised virtually all the African continent, as well as many parts of Asia and the Pacific regions, was about to be surpassed by the US after World War I.

⁴⁰ United States, the Harter Act 1893, 27 Stat. 445 (1893). The Harter Act is currently codified at 46 U.S.C. app. §§ 190-196 (1998).

⁴¹ See also Sturley (1991), pp.11-14 (pinpointing the process of the passage of the US Harter Act as a compromise balancing cargo and hull interests).

⁴² For example, in *Missouri Steamship Co.*, Re(1889) 42 Ch D 321, the traditional conflicts rule to apply British law which upheld an exculpatory clause were overlooked, and the law of the US port of loading held the exculpatory clause invalid.

⁴³ See also Sweeney (1993).

⁴⁴ Before the American Civil War (1861-1865), foreign flag carriage in the American international trade accounted for approximate 33 percent during 1855-1859, but the effect of the northern blockade of the southern originating exportation and the destruction of the northern shipping industry increased foreign carriers' involvement to 56 percent.

⁴⁵ Sweeney (1993), p.1.

⁴⁶ See Sturley (1991), p. 4.

⁴⁷ Ibid, 10.

⁴⁸ Ibid, 15-17.

⁴⁹ Sea-Carriage of Goods Act 1904, No. 14 (Australia), superseded by Sea-Carriage of Goods Act 1924, No. 22 (Australia).

⁵⁰ Compare Shipping and Seamen Act, 1903, No. 96, § 293 (New Zealand), with the US Harter Act § 3; compare Shipping and Seamen Act, 1903, § 300(1) (a) with the Harter Act § 1; compare Shipping and Seamen Act, 1903, § 300(1) (b) with Harter Act § 2; compare Shipping and Seamen Act, 1903, § 300(2) with the Harter Act § 7.

⁵¹ There were several significant differences between the Harter Act and the final Canadian legislation, the Water Carriage of Goods Act 1910, 9-10 Edw. 7, ch. 61 (Canada), superseded by Water Carriage of Goods Act,

1919.⁵² Meanwhile, several jurisdictions were at least considering their Harter-like legislation.⁵³ In contrast, the international community had accomplished little towards uniformity of maritime law.⁵⁴ Consequently, this wave of unilateral legislation made shipowners face the prospect of conflicting and non-uniform domestic regulation in many of their most important markets in the 1920s.

Not only did the wave of unilateral legislation create a mandatory framework of carriers' liability,⁵⁵ but it also pioneered the age of international unification of the ocean transport regime. Litigation subjecting the hull interests to these conflicting pieces of legislation increased their incentives to support an international resolution of the problem.⁵⁶ Bennett notes that the UK made a concession before this legislative wave of cargo interests, and decided to work towards international uniformity on sea transport carriage.⁵⁷ Sturley also claims that the domestic legislation in the late 19th and early 20th century, accompanying the threat of more extensive unilaterally enacted legislation in the 1920s, turned out to be the principal impetus for the procurement of an international agreement.⁵⁸

History has shown that the period of Harter-style domestic legislation marked the transition of changing approaches to unifying laws on bills of lading from unilateral legislation or private agreements to international agreements. In the short term, these countries passed different unilateral domestic regulations governing exoneration clauses in bills of lading; these unilateral laws increased the tension and conflicts among national laws in the cargo-claim cases for the vessel and the cargo interests. However, in the long run, this conflict of interest was an incentive to the vessel and the cargo groups to support an international regulation replacing the conflicting legislation.

1936, 1 Edw. 8, ch. 49 (Canada), codified as Carriage of Goods by Water Act, Can. Rev. Stat. ch. C-15 (1970). For example, § 5 of the Canadian Act of 1910 required a clause paramount in outbound bills of lading and prohibited choice-of-forum clauses purporting to oust or lessen the jurisdiction of any Canadian court at the port of loading. Sections 6 and 7 expanded the list of the carrier's statutory exceptions to include latent defects, fire, any reasonable deviation, strikes, and losses "arising without [the carrier's] actual fault or privity or without the fault or neglect of [the carrier's] agents, servants or employees."

⁵⁶ Sturley (1991), p.18.

⁵⁷ Bennett (1914), pp. 4, 19 (as long as the UK shipowners were regulated in their home ports, uniform regulation was preferred where they did business under the comparable regulations of their foreign competitors).

⁵⁸ Sturley (1991), 10. See also Westbrook (1990), pp.77-85, 92-96.

3. The ILA, ICC, Private Participants and a Model Bill of Lading

In addition to the domestic efforts to establish uniformity of maritime law in the late 19th century, the international community also attempted to achieve unification through three other approaches. The International Law Association ('ILA')⁵⁹ devoted its attention to private law subjects with a heavy emphasis on maritime topics.⁶⁰ Its first scheme to achieve international uniformity for the transport law governing bills of lading was proposed at the Liverpool Conference of 1882.⁶¹ This local conference merely involved private entities rather than governmental representatives, which made it significantly different from its counterpart negotiations in the 20th century.⁶² The participants were Liverpool merchants, shipowners, underwriters and lawyers.⁶³ Its approach to uniformity was "a model bill of lading that would be available for voluntary adoption by [an] agreement between the shipper and the carrier".⁶⁴ This model bill of lading reflected a compromise between the cargo and the hull interests in that it amended the common law liability.⁶⁵ It produced some innovative concepts, such as "exemption of navigation", "due diligence" to make the vessel "seaworthy", and "package limitation".⁶⁶ Although this model never achieved general acceptance, it had some influence.⁶⁷ Several of the innovations were revived later in the Hague Rules (1921),⁶⁸ and thus the compromise between the cargo and the vessel interests was embodied and embedded in the Hague Rules.

In its second attempt to achieve uniformity in the intentional carriage of goods by sea regimes, the ILA temporarily took a different approach. In lieu of the detailed model bill of

⁵⁹ The International Law Association (ILA) was founded in 1873 and initially called the Association for the Reform and Codification of the Law of Nations, changing its title to the current name in 1895. See ILA, Report of the 17th Conference 282-285 (Brussels Conference 1895).

⁶⁰ ILA, Report of the 30th Conference ('Hague Conference 1921'), vii, cited in Sturley (1990) (Volume 1), pp.50-150.

⁶¹ Because the uniform draft of bills of lading was discussed during the ensuing ILA conference at the Hamburg Conference of 1885 and the London Conference of 1887, the Liverpool Conference is regarded as part of international efforts towards uniformity. See CMI, *Travaux Préparatoires of the Hague Rules and of the Hague-Visby Rules*, <http://www.comitemaritime.org/Uploads/Publications/Travaux Préparatoires of the Hague Rules and of the Hague-Visby Rules.pdf>, 16.

⁶² Sturley (1991), pp.6-7.

⁶³ Ibid.

⁶⁴ The model bills of lading were also known as the 'Conference Form'. See ILA, Report of the 10th Conference 75, 78-80, 86 (Liverpool Conference 1882 /'Liverpool Conf. Rep.'), reprinted in Sturley, *The Legislative History of the Carriage of Goods by Sea Act and the Travaux Préparatoires of the Hague Rules* (Volume 2), 32-33, 36-38, 44.

⁶⁵ Sturley (1991), p.7.

⁶⁸ Ibid, 16.

lading, the Association proposed a set of rules - the “Hamburg Rules of Affreightment” – which contractual parties could voluntarily incorporate into their bills of lading.⁶⁹ However, these rules were adjudged to be an unworkable compromise between the cargo and the vessel interests by almost all related private entrepreneurs.⁷⁰ Thus, these rules were rescinded at the London Conference of 1887.⁷¹ Hence, history shows that uniformity can be achieved only if it is built on a workable compromise.

Thirdly, the foundation of the Comité Maritime International (CMI)⁷² had indirect but profound importance for the uniformity of the carriage of goods by sea regimes. In 1897, several national ‘Associations of Maritime Law’ joined together to establish the CMI.⁷³ This was the first international organisation concerned exclusively with maritime law and related commercial practices.⁷⁴ First, the CMI changed the approach to uniformity from modelling private agreements to diplomatic negotiation. It persuaded the Belgian government to initiate the first Diplomatic Conference on Maritime Law, held in Brussels in 1905.⁷⁵ It is apparent that the participants in this and later conferences were no longer private entrepreneurs but diplomatic representatives. In addition, both the CMI and the Diplomatic Conference on Maritime Law promoted the later passage of the Hague Rules.⁷⁶ It is worthy of note that the Hague and Visby Rules were drafted and negotiated by private entities or their associations’ representatives on substantial matters, and then these two sets of rules were finalised at the diplomatic conferences and were available for signing by political delegates, which enhanced their authority in contracting countries.

In May 1921, the ILA’s Maritime Law Committee met at the London Conference to formulate uniform model rules based on the Canadian Act governing sea bills of lading.⁷⁷ The committee appointed to prepare the draft rules contained representatives of governments, as well as delegates from private commercial sectors representing commercial interest

⁶⁹ Sturley (1991), p.8. ILA, Report of the 12th Conference (‘Hamburg Conference 1885’), 165-168 reprinted in Sturley (1990) (Volume 2), 122-125. CMI (1979), p.16.

sections instead of countries.⁷⁸ These were carriers, shippers, bankers, underwriters and their respective associations.⁷⁹ For instance, the two principal members were Sir Norman Hill, Secretary of the Liverpool Steam Ship Owners' Association (representing British shipowner interests), and James McConechy, Secretary of the Bill of Lading Committee of the Manchester Chamber of Commerce and the Manchester Association of Importers and Exporters (representing cargo interests).⁸⁰ They met to draft compromise international rules. After the finishing of the draft, the compromise rules were discussed at a meeting of the International Chamber of Commerce (ICC) in London at the end of June 1921.⁸¹ Then, delegates to the ICC conference generally approved the ILA's draft.⁸²

4. Reflections on the Age Stimulating Successor Rules: Containerisation (1950-) and 'Package'

In the part, successor rules refer to the Visby Rules and the Hamburg and Rotterdam Rules. The Hague Rules had not defined 'package', possibly because this term appeared to be clearly understood in industrial practice at the time of drafting. However, shipping practice is being changed continually. By the 1920s, goods were not always transported within the same packages which had been familiar in 1924 when the Hague Rules were first adopted.⁸³ However, by the late 1950s, the container revolution was taking place, and this started changing marine logistical reality.⁸⁴ In the breakdown of seaborne trade, approximately one third of liquid bulk cargoes and two thirds of dry cargoes⁸⁵ have been carried in containers since 1970.⁸⁶

Container ships revolutionised the transport system for industrial goods.⁸⁷ Improved rail and road infrastructure enhanced the development of combined inland and maritime transport.

⁸⁶ OECD (2001), p.4.

⁸⁷ Grammenos (2010).

However, the combined modes of transport necessitated separate contracts of carriage. Goods were moved by one or more inland carriers from an inland point to a port, then by ocean carrier, and finally by other land carriers to an inland destination; thus the freight was also subjected to at least six - and up to twenty - successive handling or sorting operations at different stages of the movement; shippers were charged separate transport rates for each portion of this movement.⁸⁸ The separately combined transport was not effectively integrated until the 1950s.⁸⁹ A significant step in unifying different transport modes into a comprehensive one was achieved when the container emerged. According to the Organization for Economic Co-operation and Development (OECD) statistics, sea container transport kept increasing in all OECD countries except in Australia, Canada and Belgium, where it fell sharply from the 1970s to about 1996, but started to increase again after that period.⁹⁰

Through the use of containers, unloading and loading of cargoes was simplified. The freight costs of loading and unloading a container were far less than those for individual packages.⁹¹ The container revolution eliminated the cost of unloading freight from rail cars or trucks on trans-shipment to a ship.⁹² Daudin estimated that containerisation led to a decrease in transport costs of between 5 and 10 percent of the goods' values.⁹³ Schmeltzer and Peavy point out that the time for loading and unloading was also shortened from three days to approximately eight hours.⁹⁴ In short, freight rates and loading times were both sharply reduced.

In consequence, courts around the world have spent decades in ascertaining the new meaning of the word "package" in the field of containerisation.⁹⁵ The principal puzzle has been whether a sealed container constitutes a single package under the un-amended Hague Rules. To bring the sea transport legal regime into line with commercial practice, its successors (Visby,⁹⁶ Hamburg⁹⁷ and Rotterdam Rules⁹⁸) include a "container" clause.⁹⁹ Container

transport has continued to expand since 1990,¹⁰⁰ with a minor decrease in 2009 during the economic crisis but a rebound in 2010.¹⁰¹

5. At the Dawn of the Next Technological Revolution: Legal Analysis of the Rotterdam Rules

5.1 Digitalisation and Electronic Commerce

Another new shipping reality is digitalization and electronic commerce. Trade has been impacted by digitalization. The world is at the dawn of the next technological revolution, bearing transformational implications for all. Digitalization will create opportunities for entrepreneurs and businesses, and bring benefits to consumers; the global growth of e-commerce is a good example of this. However, many existing practices will be disrupted, such as paper-based shipping documents. Nevertheless, shipping is ‘notorious’ for its resistance to new technologies.

Electronic transport documents have been used in shipping practice since 1970, particularly in liner carriage where transport documents are not always issued.¹⁰² The legal question is whether electronic documents can work as equivalent counterparts of paper-based documents as to sea transport.¹⁰³ In order to accommodate today’s maritime e-commerce, the UNCITRAL sought for the assistance of an non-governmental organisation -- the CMI -- who drafted the Rotterdam Rules, which try to incorporate ‘electronic transport records’. As seen, the UN has a tradition to work with other non-UN organisations.

The Rotterdam Rules have foreseen the impact of electronic documents in maritime trade and provided that ‘electronic transport records’¹⁰⁴ work equivalently as their paper transport documents.¹⁰⁵ However, today’s maritime e-commerce has not a mature technology yet.¹⁰⁶

¹⁰⁵ Alba (2009), pp.803, 816 (referring to the Comite Maritime International Rules for Electronic Bills of Lading and noting that the electronic equivalence approach is a developed but problematic solution addressing the existing needs of electronic commerce). CMI, Rules for Electronic Bills of Lading.

The technical requirement¹⁰⁷ for the incorporation of electronic equivalents under the Rotterdam Rules can be potentially resolved by blockchain. The singularity (uniqueness) of transport documents is commercially required and expected by law, because of their roles as documents of title. Even though the singularity has not been well achieved under the prospective technology in existing electronic systems, such as Bolero, ESS-Databridge,TM Electronic data exchange systems and the Atlantic Container Line data-freight system,¹⁰⁸

Although shipping has traditionally been resistant to technological advances, this is likely to change drastically in the future. Blockchain is a distributed ledger technology which enables peer-to-peer transactions which are securely recorded, because in a ledger, in de-centralised multiple locations. According to Maersk, Lloyd's List and UNCTAD, there have been some initiatives in the use of blockchain in shipping: First, a Maersk-IBM intend to establish a joint venture (which remains subject to the receipt of regulatory approvals) which will develop an open trade digitalization platform, deploying blockchain and other cloud-based, open-source technologies. Second, a shipping consortium consisting of Hyundai Merchant Marine and other members conducted a *pilot* voyage in September 2017 which has applied blockchain to secure paperless processes for shipment booking and cargo delivery.¹⁰⁹ Third, several smart contract¹¹⁰ prototypes have been launched which involve digitalizing electronic bills of lading and other trade documents, such as CargoDocs under ESS-DOCS, and Cargo X.

The author attended the 14th IISTL Colloquium on New Technologies and Shipping/Trade Law and had informal conversations with representatives from the shipping industry and relevant associations or bodies: it seems that they have not experimented Blockchain in their business; an exceptional case is bunker supply contract sometimes involves 'smart contract' and blockchain. Moreover, Professor M Sturley, as a draftsman of the RR, argues that the RR have already envisaged the technological advance and e-commerce. However, the author examines Chapter 3 of the RR and finds the inconsistency of categories of paper-based

¹⁰⁶ See more about the implications of electronic commerce in the shipping industry, in Wilson (2010), pp. 165-171 (illustrating the electronic bills of lading in the Atlantic container liner data freight system, the Electronic Data Interchange ('EDI') system and the Bolero system).

¹⁰⁹ Lloyd's List (2017).

¹¹⁰ Smart contracts are contracts in the form of a computer programme run within blockchain which automate the implementation of the terms and conditions of any contractual agreements between parties.

transport records with their electronic records.¹¹¹ The RR provide three kinds of paper-based shipping documents, but only two kinds of electronic counterparts.

Thanks to the positive results achieved in those blockchain initiatives, blockchain has demonstrated its *potential*¹¹² to be used in the shipping industry to accomplish the singularity of paperless electronic shipping documents.¹¹³ Nevertheless, the potential utilisation of blockchain technology will bring about further challenges. One new issue is lack of uniform standards for and interoperability between various initiatives given that many blockchain initiatives are flourishing. Some observers point out that “it would be detrimental for the shipping industry if the different factions and initiatives compete head on trying to make their specific blockchain technology choice the de facto standard for the industry”.¹¹⁴ Another concern relates to new security challenges. The use of blockchain may help to solve some security problems but may also lead to new potentially more complicated security challenges, since some methods can possibly still be used to hack into a maritime transaction blockchain.¹¹⁵ Accordingly, the UN’s approach to the uniformity of carriage of goods by sea regimes needs to reconsider the pace of updating static legal rules and how to keep the rules appropriately evolving with the shipping developments.

5.2 Multimodal Transport: Are the Rotterdam Rules the Cure?

The container became widely used from the 1970s.¹¹⁶ Due to dry cargoes being mainly containerised, large sea carriers extended their business to inland-route transport to earn additional freight.¹¹⁷ Consequently, the traditional ocean carriers started to become multimodal operators.¹¹⁸ They stepped into the air, rail and road transport business because of commercial interests in warehousing, consolidating and distributing freight.¹¹⁹ The commercial motivation prompted a carrier to fulfil the transport chain from the seller’s warehouse to the buyer’s warehouse.¹²⁰ Whether or not they are directly involved as multimodal carriers, sea carriers are likely to be agents for multimodal transport operators

(MTO).¹²¹ Under the auspices of UNCTAD rather than UNCITRAL, the United Nations Convention on International Multimodal Transport of Goods was signed in 1980.¹²² This convention dealt with the conflicts between the unimodal-governing carriage conventions, but it seems that it will not gain the minimum number of votes for ratification to come into effect globally.¹²³ The Rotterdam Rules also extend the scope of application to cover multimodal transport¹²⁴ which is governed by a number of mandatory rules of other transport modes.

Related conventions provided various limitations of liability and defences for carriers of modes of rail,¹²⁵ air¹²⁶ and motor truck¹²⁷ transport.¹²⁸ Diamond argues that the Rotterdam Rules merely absolved legal conflicts among these conventions of different modes of carriage on multimodal transport at a limited extent.¹²⁹ Moreover, existing conventions of other transport modes had not been real uniform rules through global ratification.¹³⁰ Consequently, the Rotterdam Rules were too ambitious to regulate multimodal transport aspects. This would prevent the Rules from being widely ratified as global, uniform rules.

¹³¹ Rotterdam Rules Article 82 (*International conventions governing the carriage of goods by other modes of transport*).

Started by the statement that “[n]othing in this Convention affects the application of any of the following international conventions...,” Article 82 shows that the RR employ the network-liability approach to dealing with potential conflicts between carriage conventions. This Article is part of Chapter 17 of the RR (“Matters not governed by this Convention”), which implies that the circumstances described within Article 82 are outside the scope of application of the Convention (RR).¹³²

Subparagraph (a) aims to prevent the RR from prevailing over any convention on the carriage of goods by air “to the extent that such convention according to its terms applies to any part of the contract of carriage”.¹³³ Even though the Montreal Convention does not govern any period of “carriage by land, by sea or by inland waterway outside an airport”, two exceptions fall within the Montreal Convention’s coverage.¹³⁴ First, if carriage takes place “in the performance of a contract for carriage by air, for the purpose of loading, delivery or trans-shipment, any damage is presumed, subject to proof to the contrary, to have been the result of an event which took place during air transport”; second, if a contract of carriage stipulates that goods would be carried by air, and a carrier arbitrarily changes to another transport mode (e.g. by sea) without the consent of the consignor.¹³⁵ Thus, under these two circumstances, the Montreal Convention can regulate carriage by sea. De Wit¹³⁶ and van der Ziel¹³⁷ claim that Article 82 (a) is sufficient to address the conflicts between sea and air legs. Nevertheless, the combination of carriage by sea and by air is not commonly used in commercial reality.

Despite of the fact that the RR is not applicable in the two cases mentioned above,¹³⁸ Diamond points out/pinpoints that the RR Article 82 (a) does not suffice to harmonise other conflicts with air transport conventions, if the place of damage or loss cannot be proved.¹³⁹ For instance, suppose there is a multimodal transport bill of lading, including (international) air and sea legs; some goods are carried by the modes agreed by the carrier and the consignee (not the second circumstance mentioned above), and the goods are damaged; however, the place of damage is not identified (if the place is known, it is the first circumstance mentioned

¹³⁸ See also De Wit (2010), pp.100-107, paragraphs 5.53-5.73.

¹³⁹ Diamond (2009), p. 454.

above).¹⁴⁰ Since the place of damage is unknown, it is debatable whether the RR are applicable or not.

Similarly, Article 82's subparagraphs (b), (c) and (d) prevent the RR to a limited extent from conflicting with any existing *convention* which applies for governing the carriage of goods by road,¹⁴¹ rail¹⁴² and inland waterways.¹⁴³ Potential conflicts would arise between the RR and a broad range of sea-and-road transport *instruments*;¹⁴⁴ the CMR is one of these and applies compulsorily.¹⁴⁵ Under Subparagraph (b),¹⁴⁶ the RR merely scratch the surface of the problem of conflicts between the sea and the road transport conventions (e.g. the CMR Article 2) for a roll-on and roll-off ('ro-ro') carriage, in which the goods carried "remain loaded on a road cargo vehicle carried on board a ship". Therefore, Article 82 (b) will prevent the RR from prevailing over the CMR, if only "goods ... remain loaded on a road cargo vehicle carried on board a ship". That is, in the event of a roll-on and roll-off contract of carriage, the RR would not conflict with the CMR which apply to the whole¹⁴⁷ carriage. Nevertheless, other potential conflicts still remain/stand under this subparagraph as to carriage of road and sea.

Likewise, the same problem also applies to subsections (c)¹⁴⁸ and (d).¹⁴⁹ Under Subparagraph (c), the RR come into play as the "supplement to the carriage by rail", without a clear definition of "supplement". Under Subparagraph (d) on inland waterways carriage, the RR are prevailed over in the very limited case of carriage "without trans-shipment both by inland

¹⁴⁰ Ibid.

¹⁴¹ CMR Article 41.1 states "any stipulation which would directly or indirectly derogate from the provisions of this Convention shall be null and void". *Datec Electronics v United Parcels Services* [2007] UKHL 23. See Ulfbeck (2010), pp.43-76

¹⁴² CIM Articles 1.3 (governing a single contract including international road and inland waterway carriage), Article 5 (stating that the mandatory rules cannot be contracted out of or derogated from unless as otherwise provided for in the Rules themselves), Article 23.1

¹⁴³ Sturley et al (2010), pp.71-75, paragraphs 4.031-4.045, pp.169-176.; paragraphs 5.245-5.259; the UNCITRAL 20th Session Report, paragraphs 163-166.

¹⁴⁴ *Thermo Engineers v. Ferrymasters Ltd* [1981] 1 W.L.R.

¹⁴⁵ CMR Article 2.1 provides: "Where the vehicle containing the goods is carried over part of the journey by sea, rail, inland waterways or air, and, except where the provisions of article 14 are applicable, *the goods are not unloaded from the vehicle*, this Convention [CMR] shall nevertheless apply to the *whole* of the carriage." CMR Article 41 states "1. Subject to the provisions of article 40, any stipulation which would directly or indirectly derogate from the provisions of this Convention shall be null and void. The nullity of such a stipulation shall not involve the nullity of the other provisions of the contract." E.g. *T Comedy v. Easy Managed Transport* [2007] EWHC 611 (holding that the a general lien clause in the truck carriage contract would derogate from the consignees' right to delivery on payment of the charges shown to be due on the consignment note (Article 13.1) would be null and void under Article 41 of the CMR).

¹⁴⁶ See also De Wit (2010), pp. 100-107, paragraphs 5.53-5.73.

¹⁴⁷ CMR Article 2.

¹⁴⁸ De Wit (2010), pp. 100-107, paragraphs 5.53-5.73.

¹⁴⁹ De Wit, *ibid.* See also Sturley (2010), p.73, paragraph 4.038.

waterways and sea”;¹⁵⁰ however, in this case, the Budapest Convention (CMNI) is possibly not applicable.¹⁵¹ Consequently, there is a possibility that an inland waterway carriage without trans-shipment both by inland waterways and sea is governed by neither the RR, nor the Budapest Convention.

Therefore, Article 82 has not addressed very well conflicts between conventions on different modes of transport in cases of multimodal carriage. These problematic provisions cause legal uncertainties. To address the conflicts which arise from litigation over allocated (because unprovable) damage or loss, there are two options: first, to *admit* that *both* the RR and a potential conflicting carriage convention are applicable,¹⁵² so that either puts Article 82 within another chapter rather than Chapter 17 (“matters not governed by this Convention [RR]”), or maintain that Article 82 be part of Chapter 17 of the RR in addition to amending the title of Chapter 17 (e.g. to “Matters suspending the Convention’s application”); second, to clearly state which convention prevails over the others, or to set out a uniform¹⁵³ level of liability in the event of unallocated damage, loss or delay.

5.2.2 Article 26¹⁵⁴ of the RR

Article 26 aims to establish a ‘limited network system’¹⁵⁵ on carriers’ liability with regard to multimodal transport, in order to reduce the conflicts between the RR and other international instruments. For the application of this Article, it must be proved where loss, damage, or delay occurred.¹⁵⁶ However, if it cannot be proved where the event (loss, damage, or delay caused) occurred, or if the damage was caused during one leg and continued during following legs, Article 26 is not applicable. Thus, if a case falls outside this Article’s ambit, Article 26 itself cannot avoid the conflicts between compulsory rules of different modes of transport.¹⁵⁷

¹⁵⁰ Rotterdam Rules Article 82(d).

¹⁵¹ CMNI Article 2.2.

¹⁵² Cf. Honka, (2010), pp. 349-354.

¹⁵³ Si, Y., & Guo, P. (2010), p.259.

¹⁵⁴ Rotterdam Rules Article 26. See more in De Wit (2010).

¹⁵⁵ A pure network system makes all the unimodal rules applicable directly between the carrier and the shipper as to each mode of transport. A uniform system makes the same rules apply between the carrier and the shipper to the whole multimodal transport with no regard to the unimodal rules applicable to individual legs of the multimodal transport. In a limited network system which mixes uniform and network systems, the mandatory rules which apply between the carrier and the shipper vary according to and are based on the underlying unimodal rules applicable to a related mode of transport, while other issues remain regulated under the RR for the whole multimodal transport. See Uffe (2010), pp.143-145.

¹⁵⁶ Uffe (2010), p.146.

¹⁵⁷ Diamond (2009), p 456.

Moreover, Article 26 has not dealt with the relationships between the RR and mandatory national laws which conflict with the RR. This is because the words “international instruments” (Article 26) do not cover national laws, so Article 26 does not apply. An earlier draft¹⁵⁸ of UNCITRAL will absolve this problem.

Furthermore, the use of the words “international¹⁵⁹ instrument”¹⁶⁰ in Article 26 implies regulation of regional economic organisations, and thus they have a broader connotation than the word “convention” (between nations) in Article 82. It is worth noting that Article 26 does not circumscribe the international instruments like those “in force at the time this Convention [i.e. the RR] comes into force” (Article 82); rather it embraces instruments activated “at the time of such loss, damage or event or circumstance causing delay”.¹⁶¹ As we have seen, the RR might be overridden by certain future international instruments. Thus, it must be borne in mind that an uncertain number of potential instruments could lead to lack of predictability on a worldwide level, and increasing legal costs.

Therefore, in the three categories of circumstances mentioned above, it is difficult to predict how potential conflicts among different transport modes can be resolved. These conflicts could also promote legal uncertainty concerning similar cargo litigation in different jurisdictions, and accompanying increased legal costs. In order to handle the conflicts between the RR and related national laws, the wording “international instrument, at the time of such loss, damage or ... delay” is needed to be replaced and ensure that merely “international conventions” “in force at the time this Convention [i.e. the RR] comes into force” prevailing over the RR. This new extension within Article 26 will regulate the relationships between the RR and national instruments. (Namely, the RR could prevail over the national instruments).

¹⁵⁸ In order to cater for this need, UNCITRAL Working Group III drafted a provision, including mandatory national laws, into Article 26, so that “it specially identified the law in question, that the law applied to the loss or damage in question and that the damage occurred in that state’s territory.” Yet, such a draft provision was left out in the final version.

¹⁵⁹ The limited network system on liability applies to the relevant provisions only of international instruments, such as EU regulations; see Uffe (2010), p.147. See also Sturley (2010), pp. 59-75, paragraph 4.022; UNCITRAL (1987), Doc.A/CN.9/642, 20th Session Report, paragraphs 163-166.

¹⁶⁰ The wording of Article 26 is “international instrument” instead of international ‘convention’, which refers to a broader range of regulations. See Sturley et al (2010), multimodal aspects, pp.59-75, paragraph 4.023; the UNCITRAL 21st Session Report, paragraph 84. Rasmussen (2010), p.147.

¹⁶¹ Rotterdam Rules Article 26. van der Ziel (2009), p.989.

6. Concluding Remarks on the Prospect of the Rotterdam Rules

In this research, the author has conducted historical and legal analysis on the attempts to unifying carriage of goods by sea rules, in order to shed light on *Lex Maritima* and the prospect of the latest convention attempting to unifying the law governing carriage of goods by sea. Moreover, the concluding section probes into the attitudes, which impact on the adoption of the Rotterdam Rules, of the shipping powers and some countries, are explored to add further information to the previous sections:

In the Netherlands, two bills concerning the RR have presented at the Parliament. The first would give four separate components of the Kingdom of the Netherlands – the Netherlands, Aruba, Curacao and Sint Maarten – the power to ratify the RR and denounce the version of the Hague-Visby Rules to which they are party. The second would remove the Hague-Visby provisions in its Civil Code and replace them with the RR which would be incorporated into the Code by reference. Baughen considers that these two bills are expected to pass soon but this will not lead to an immediate replacement of the Hague-Visby Rules with the RR, and thus, the recent Dutch legislative move might constitute ‘a small step on the road to Rotterdam’.¹⁶²

It is worthwhile noting that most countries, including the Netherlands, are waiting to see whether or not other countries - mainly influential countries - ratify the RR before taking action. For instance, the explanatory notes to both Dutch bills provide that it will be for the government to decide on the date of ratification and entry into force and this may depend on ratification of the RR by neighbouring countries, such as Germany and France and major trading parties such as China and the US – no mention is made of the UK.

Turning to the UK, the government is being overwhelmed by Brexit negotiations and could not cope with other matters, such as the ratification of the RR. Prime Minister published a key white paper concerning Brexit on 12 July 2018, which is called ‘Chequers plan’ which seems her only plan. Nevertheless, this plan has been publically ‘disliked’ by all European leaders.¹⁶³ In short, the UK government is overwhelmed, if not paralysed, by the Brexit negotiations.

¹⁶² Baughen (2018).

¹⁶³ UK Government (2018)

Scandinavian countries are relatively ‘more friendly’ to the RR, and have had an initiative to ratify them since the year Spain did so. However, after a while, they decided to wait to see what other European neighbours and the USA do first. By this September, they still maintain this attitude.

Last, but by no means least, is the USA seems facing domestic objection from its port industry. The US port industry was persuaded by a lawyer and then ‘believed’ ratifying the RR would harm their interests, so this industry lobbied the Congress not to adopt the RR.¹⁶⁴

In conclusion, this research has examined *Lex Maritima* by taking a close look at carriage of goods by sea. The historical and legal analysis of the attempts to unifying carriage of goods by sea rules has demonstrated that this is an odyssey. Further analysis of the attitudes of the shipping and trade countries towards the Rotterdam Rules indicate that this Convention will not accomplish legal uniformity of carriage of goods by sea, because the Rotterdam Rules will not be widely adopted, at least not in the near future.

¹⁶⁴ Information based on a private conversation with a US delegate of the RR negotiations. See details in Sturley (2016)
